PROFESSIONAL SUMMARY

Application Support Analyst with 6+ years of experience with a proven track record of delivering results, supporting enterprise applications, CRM/ERP systems, and cloud-based business platforms. Expert in troubleshooting, incident management, SQL database, API integration and end user support. Successful experience in analysing technical problems, optimising system performance and providing solutions in a fast-paced environment. Excellent communicator with a high level of customer service, problem-solving and technical coordination skills, dedicated to providing high-quality services and effective operation.

CORE COMPETENCIES

- Application Support & Incident Resolution with strong troubleshooting and SLA-based issue management.
- CRM & ERP system support, configuration, and business process optimisation.
- ServiceM8 administration, including workflows, automation, and process improvement.
- SQL, MySQL & MongoDB for data querying, validation, and reporting.
- REST APIs & JSON integration support across business systems.
- Windows & Linux Systems Administration, Microsoft Azure (AZ-900), AWS Cloud Services & Monitoring
- Jira, ServiceNow & Git for incident tracking, change management, and collaboration.
- Agile/Scrum experience working in cross-functional delivery teams.

PROFESSIONAL EXPERIENCE

Application Support Analyst, Electrofrost Inc, Mississauga, Sep 2025 – Present

- Provided application and technical support for internal business applications, including ServiceM8, CRM systems, and web applications, ensuring high system availability and reliable user experience.
- Investigated and resolved application incidents and user support tickets within SLA timelines, applying incident management practices and escalating complex issues when required.
- Performed root cause analysis (RCA) to identify recurring issues, improve system stability, and enhance business efficiency.
- Configured and maintained custom forms, workflows, and automations in ServiceM8, optimising business processes and reducing manual effort.
- Monitored application performance, websites, and cloud-hosted services to maintain system availability, data integrity, and operational reliability.
- Supported CRM administration, user access, lead management, and maintained accurate business and customer data while following security and access control best practices.
- Delivered end-user support, troubleshooting, and user training to improve system adoption and resolve technical issues efficiently.
